

CARDS CREATED FROM MOTHERBOARD

# Artist Trading Card Templates

When creating ATCs, I sometimes like to make a large Motherboard first and then cut out smaller ATCs from the Motherboard.

To make things easier, I made templates out of heavy card with the centres cut out. This helps me see how the smaller cards will look before I actually cut them.

I add 3/4 inch on each side of the template so that it is easier to handle. You can make the outer frame larger or smaller. The key measurement is the inner window.

## HOW TO USE THE TEMPLATES

- Create the template by cutting to the correct measurements.
- Place a template over your Motherboard to be able to see the art below.
- Move the template around until you are happy with the composition.
- Use a pencil to trace the inside window.
- Remove the template and cut along the pencil line.
